SURF

MOVES WHILE SITTING
AND KEEPS YOU FIT

ROVO SURF

DIRECT, ACTIVE AND DYNAMIC

SURFING IS THE NEW SITTING

Surfing instead of sitting: The new ROVO SURF brings a breath of fresh air to the workplace. SURF activates like hardly any other chair. A firm sit in the saddle transmits each movement directly to the stool which absorbs it and gives it back dynamically. Playfully and easily the whole body comes in motion.

As it is with surfing, SURF activates many muscle groups at the same time. The SURF constantly changes the body between tension and relaxation. This is fun, refreshes and trains the sense of balance for a healthy posture.

On its 5 wheels SURF is always where you want it to be – for long concentrated work as well as for quick meetings and inspiring teamwork.

STIMULATING ERGONOMICALLY

THE FUN OF MOVEMENT COMES WITH SITTING

The integrated ERGO BALANCE 3D technology makes sitting mobile and keeps muscles, intervertebral discs, tendons and joints fit. It is back-active.

The dynamic gas spring stimulates for bouncing: this provokes and increases blood circulation.

The saddle seat assists the fun of movement and an active posture with a lot of body tension. In this way, the muscles are strengthened and the spine is relieved.

Seat height adjustment and sliding seat:

The sitting height is infinitely adjustable by the gas spring height adjustment. It springs softly and dynamically and invites for bouncing. The saddle can be moved horizontally at three positions. The centre of gravity above the gas spring and the individual sitting feeling changes noticeably.

ERGO BALANCE technology under the saddle:

The ERGO BALANCE movement element is integrated close to the body directly in the seat and is 360° mobile. Therefore, the saddle already reacts even to small pelvic movements. This mobilizes the back muscles, improves the fluid supply to the intervertebral discs and increases the blood circulation.

Large radius of movement with a secure sitting feeling:

Close to the ground in the base is the second ERGO BALANCE motion element visibly integrated – for a large operating radius. The entire body is kept in motion. Bending over to the desk, the back remains straight just by itself.
